The NorNet Edge (NNE) testbed for mobile broadband measurements

Overview of NNE

Ongoing activities

Plans for the future

NNE testbed

Features

- hundreds of dedicated measurement nodes all over Norway
- connected to 4 UMTS and 1 CDMA networks in Norway
- running standard Linux distribution
- backed by server-side infrastructure and measurement framework

Deployment as of today

- 100+ nodes with 3G connections
- 20+ nodes with LTE connections
- 4 mobile nodes on trains

Infrastructure

Measurement node: what's inside

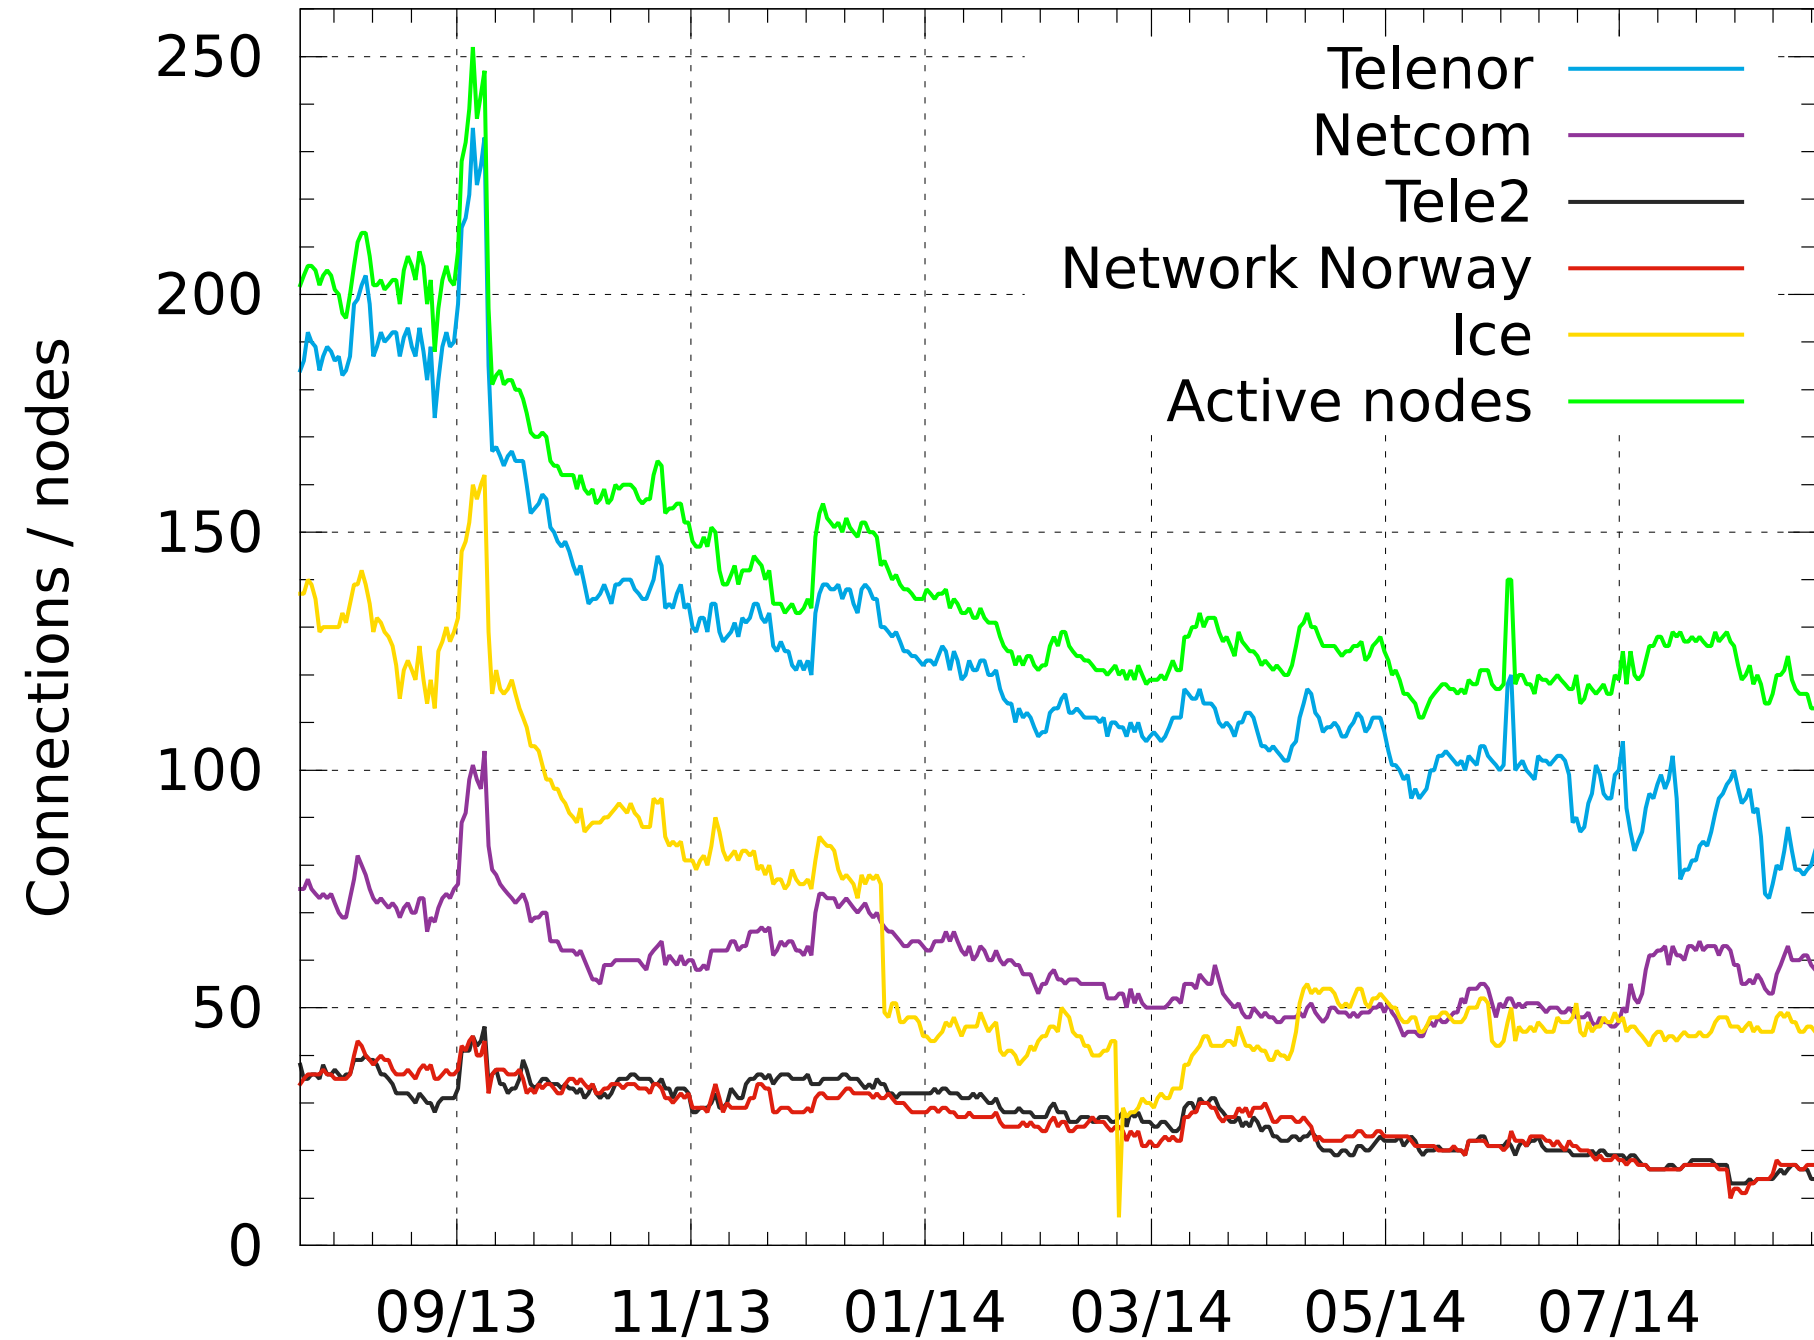

Hardware

- Samsung Cortex A8 1 GHz processor
- 512 MB RAM + 512 MB NAND flash
- 7 USB + 1 Ethernet ports
- 16GB SD card
- 1-4 x USB 3G (UMTS) modems:
 - Huawei E353u-2 (HSPA+)
 - Huawei E392u-12 (DC-HSPA+ and LTE)
 - 1 x CDMA Ev-Do modem
- 1 x USB WiFi adapter (optional)

Tools

- MBB connection manager with recovery and metadata support
- Reverse tunnel to an SSH proxy with local and remote port forwards
- Measurement framework, node monitor and watchdog

LTE deployment

Started June 2014

20+ nodes

Currently hosted by Simula & UiB employees

NwN@Telenor and Tele2@Netcom upcoming

Huawei E392-u12
LTE Cat.3 (2x2 MIMO)

 Telenor+Netcom (10)

 Telenor (9)

 Netcom (3)

Mobile nodes on trains

Started April 2014

4 nodes

Stability is the major concern

Infrastructure changes since last year

Improved MBB connection manager

- better network connection recovery
- connection metadata by *polling* the modems
- LTE attributes: RRC state, RSRP, RSRQ
- added support for Ice U-90 USB modems

Measurement framework

- HTTP download and SIP measurements
- GPS data collection from trains

Upgraded VMware cluster

- 2x Dell PowerEdge R710 servers (12 cores, 128 GB RAM)
- RAID 10 storage with 14.5 TB of effective disk space
- Monitored data center

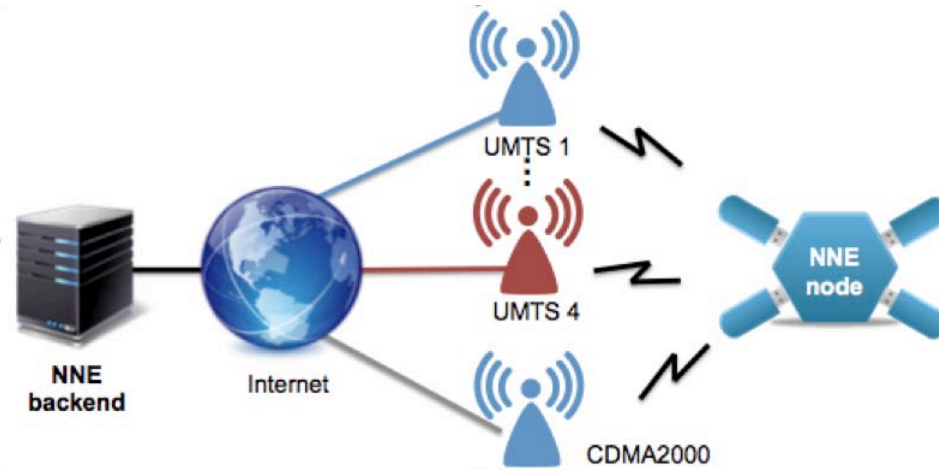

Ongoing work + plans

- Redeployment of nodes to new hosts
- 70 LTE nodes by the end of September 2014
- 10 mobile nodes by the end of year 2014
- Look into stability and performance when mobile and/or on LTE
- Tilstandrappport 2014
- Start researching the new hardware for measurement nodes
- An updated version of robustnett.no (+more measurements)
- Understanding and improving stability with better monitoring

Overview

NorNet Edge is a powerful multi-homed platform for measuring MBB networks

Connected to five different 3G/4G Norwegian MBB networks

Supports large-scale measurements at control, data and application planes

Contains measurement framework for easier experimentation
